Work progress :

- Trained the Temporal Convolutional Network (TCN) model using historical financial data from 2015–2022 and optimized key hyperparameters such as learning rate, dropout rate, and batch size to achieve minimal validation loss and stable convergence.
- Performed out-of-sample backtesting on unseen market data from 2023–2024 to evaluate the model’s generalization capability under new market conditions and assess potential overfitting.
- Computed core performance metrics including Sharpe Ratio, Maximum Drawdown, and Total Return to measure risk-adjusted returns and overall strategy effectiveness.
- Analyzed backtesting results to validate model robustness and ensure the trading strategy maintained consistent performance across different market regimes.
