Work progress :

- Generated high-impact visualizations, including stable and crisis-period market network graphs, to illustrate structural differences in asset correlations under normal and stressed conditions.
- Created a residual heatmap to demonstrate the temporal evolution of “Locomis” mispricing signals across assets and highlight anomaly detection patterns.
- Developed a comparative equity curve plot showing the algorithm’s cumulative returns versus the benchmark index to evaluate relative performance.
- Prepared and refined all visual outputs as key storytelling elements for the final presentation to clearly communicate model behavior, strategy effectiveness, and financial impact.
