Work progress (To be filled by students)

- Implemented the asset evaluation module to compute and export performance metrics (Sharpe Ratio, Maximum Drawdown, Total Return) per asset, along with comparison tables and plots for intuitive ranking of instruments.
- Performed additional robustness checks by re-running the strategy under both normal and crash market regimes and cross-validating quantitative metrics with previously generated visualizations to ensure consistency of insights.
- Planned and initiated further method improvements, including refining risk-control logic (deadband/volatility scaling thresholds) and exploring enhancements to the graph-based residual signals for more reliable trade decisions across changing market regimes.
